## SUMMARY

Computer Engineering student with hands-on experience building end-to-end AI/ML pipelines using PyTorch, BERT, and Flask. Built and deployed 4+ production ML projects — including a legal document classifier on Hugging Face and a food recognition system achieving 92% accuracy. Seeking AI/ML internship roles to solve real-world problems at scale.

## TECHNICAL SKILLS

**AI / ML:** PyTorch, TensorFlow, Hugging Face, scikit-learn, BERT, ResNet-50, K-Means, NLP

**Backend / APIs:** Python, Flask, FastAPI, Node.js, Express.js

**Frontend:** React.js, Next.js, HTML/CSS

**Data & Tools:** Pandas, NumPy, SQL, MongoDB, Git, Jupyter, Prompt Engineering, Generative AI

**Deployment:** Hugging Face Spaces, Vercel, REST APIs

## PROJECTS

### Indian Legal Document Classifier

Tech: Python, BERT, Flask, React.js, Hugging Face Spaces | [Live Demo](#) | [GitHub](#)

- Fine-tuned BERT on a custom Indian legal dataset with 10+ document categories, achieving **92% validation accuracy**
- Built and deployed a full-stack application (Flask + React.js) on Hugging Face Spaces, enabling real-time document classification in under 2 seconds
- Designed an end-to-end ML pipeline covering data preprocessing, tokenization, model training, evaluation, and cloud deployment

### NGO Food Donation Platform

Tech: Python, PyTorch, ResNet-50, Flask, React.js, Computer Vision

- Built a ResNet-50 food recognition model using PyTorch, achieving **92% accuracy** on the Food-101 dataset (101 classes, 100K+ images)
- Designed a real-time image processing pipeline for automated food recognition and donation tracking, reducing manual logging effort
- Integrated a Generative AI component for food quantity estimation from uploaded images

### Mood-Based Song Recommendation System

Tech: Python, Pandas, scikit-learn, Flask | [GitHub](#)

- Developed a mood-based music recommendation system using K-Means clustering on **10,000+ Spotify tracks**, categorizing songs into mood clusters based on audio features (valence, tempo, energy)
- Built and deployed a real-time Flask REST API serving mood predictions with sub-second response time
- Cleaned and normalized the dataset using Pandas and saved a fitted scaler for consistent inference across sessions

### Fake News Detection System

Tech: Python, NLP, TF-IDF, scikit-learn | [Live Demo](#)

- Built an NLP pipeline (tokenization, TF-IDF vectorization, classification) to detect fake vs real news articles, achieving **87% accuracy**
- Evaluated multiple classifiers (Logistic Regression, Naive Bayes, SVM) and selected the best-performing model based on F1-score

## INTERNSHIP

### MERN Stack Web Development Intern — EYGDS & AICTE

Feb 2025 – Mar 2025

- Built and deployed a full-stack Recipe Sharing Platform using MongoDB, Express.js, React.js, and Node.js, delivering **8+ REST API endpoints** for auth, CRUD, and real-time data handling
- Reduced average page load time by **~30%** through optimized component structure and efficient MongoDB queries
- Collaborated on a production-grade codebase following MVC architecture and Git-based version control workflows

### Data Analytics Intern — VOIS (Vodafone Intelligent Solutions)

Oct 2024 – Nov 2024

- Automated data analysis workflows across **5+ datasets** using AI-LLMs, cutting manual analysis time by approximately 40%
- Implemented AI-powered pipelines to extract insights and generate structured reports, improving reporting turnaround
- Applied data cleaning and transformation techniques using Python and Pandas on real-world business datasets

## EDUCATION

---

### Bachelor of Engineering – Computer Engineering

Nov 2022 – May 2026

K J Collage of Engineering and Management Research, Pune | SGPA: 8.9 | Pune, Maharashtra

## CERTIFICATIONS

---

- Machine Learning Specialization — DeepLearning.AI, Stanford University (Feb 2026)
- Intro to Machine Learning — Kaggle (Jul 2025)
- Introduction to Generative AI — Google (Sep 2024)

## ADDITIONAL INFORMATION

---

- Languages: English, Hindi, Marathi
- Awards: Techathon 2.0 by Innovation Foundation Pune (2025)
